The Registered Brand of our STEEL CEILINGS is

"Steleonite."

Catalogue No. 8.

FACTORY:
Bethnal Green,
LONDON, E., (England.)

The

British Stamped Metal Ceiling Co., Limited.

HEAD OFFICE:

97 Queen Victoria Street, London, E.C.

Branch Office:—35 MOORFIELDS, LIVERPOOL.

All Prices
FOR EXPORT, are f.o.b. LONDON (5-Mile Radius).

FOR HOME, free on rail LONDON.

Packing charged at Cost Price, and cannot be returned.

Export Office:
1 Lombard Court,
E.C.

Our Ceilings are made of No. 29 Gauge Best Quality

Bessemer Steel Sheets.

They are free from scale, and wire nails can be easily driven through them.

Weight of our Steel Ceilings: about *60* lbs. per 100 square feet net.

Burleigh Ltd., Printers and Engravers, Bristol, Eng.

From the collections of Sydney Living Museums / Historic Houses Trust of NSW

Directions for ordering Steel Ceilings.

WHEN ordering Steel Ceilings, give exact measurements (from Architect's Plan, if possible) showing:

All openings, offsets, staircase, lift openings, fixed chandeliers, and other drops.
State if cornice or cove is wanted and how deep they shall extend down the wall.
If girder casings are required, show actual size with section of the girder.

When we receive these particulars a sketch of the ceiling, showing the arrangement of the patterns, spacing of battens, and sections of cornices, will be sent with estimate.

Directions for Fixing Steel Ceilings.

Tools required: Hammer, Saw for Battens, Tinner's Shears and Metal Saw.

These Directions apply to all patterns, whether fixed direct to Beams or to Plastered Ceilings.

Strike the centre line, locating the centre piece, if centres are used; if not use the centre line for first sheet. Nail the battens crosswise level of the beams, with nails reaching well into them. Space the battens to suit the size of each sheet and apply cross strips wherever required, *all to be flush and level.* After the battens are in position put up the metal sheets, centre first, working towards all four sides, cornice next, then border or margin.

Old Plaster Ceilings need not be removed, as the metal ceilings will support them.

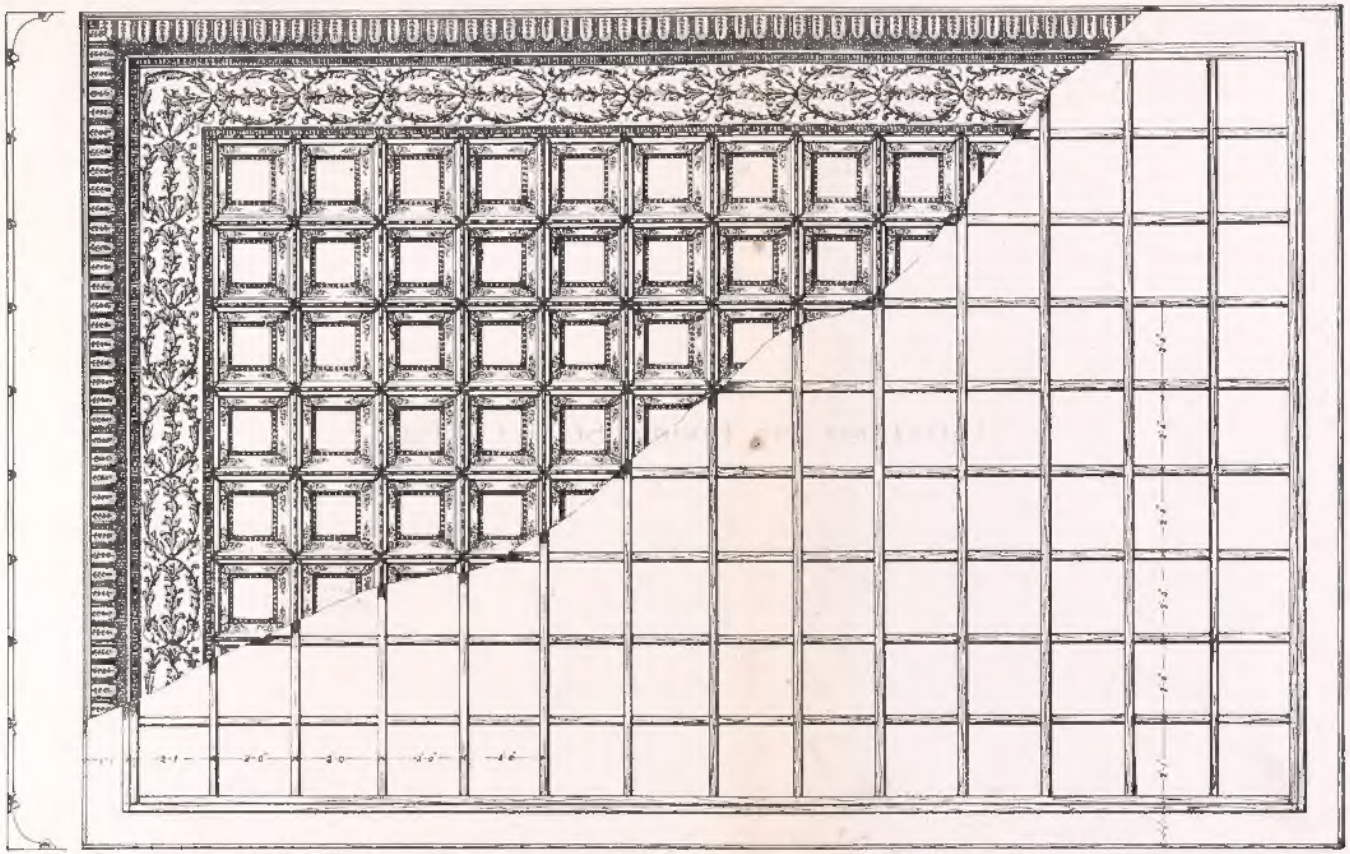
For internal Cornice or Cove Mitres: Butt cornice or cove plumb against the wall line and mark on the next piece the angle to cut into the curve. Cut it exact and butt it into the curve of the first piece put up.

External Mitres are soldered to exact angle.

From the collections of Sydney Living Museums / Historic Houses Trust of NSW

This sketch shows a Ceiling in course of erection.

The spacing of the battens for the pattern No. 186—which represents a panel 2-ft. by 2-ft.—can be clearly seen, as well as the battens for cove, mouldings, and marginal border.



From the collections of Sydney Living Museums / Historic Houses Trust of NSW

Telegraph and Cable Code

For Catalogue 1907.

SECTION **A.**

For BESSEMER STEEL only, unless otherwise stated.

The numbers indicate **patterns** as well as **sizes**. Thus, if **Jenkin** is used, it refers to panel 187, 2ft. × 2ft. If **Jonas** is used, it refers to sheets 187, 2ft. × 8ft. If **Javeling** is used, it means a ceiling illustrated on [illegible].

If the word **foot,** or **yard,** or **metre,** is used with the code word for **ceiling patterns,** we understand it to mean **square** measurement.

When **foot, yard,** or **metre** is used with the code word for **mouldings** or **coves,** we understand it to mean **lineal** measurement.

Ft. stands for foot. In stands for inch.
Yd. „ „ yard. Mt. „ „ metres.

These abbreviations may be added to the code for figures.

Dimensions for ceilings are **presumed to be in feet and inches,** unless yard or metre are expressly stated.

Code for Figures:

1	2	3	4	5	6	7	8	9	0
Ba	Be	Ca	Co	Da	De	Du	Ga	Ge	Ho	Hu

A size 14 feet 10 inches by 53 feet 2 inches is expressed thus
Bacofthuin by Dacaifbein.

A size 35 yards superficial measurement is expressed thus **Cadayd.**

A size 20 metres by 6 metres is expressed thus **Behomt by Demt.**

++
